Overview

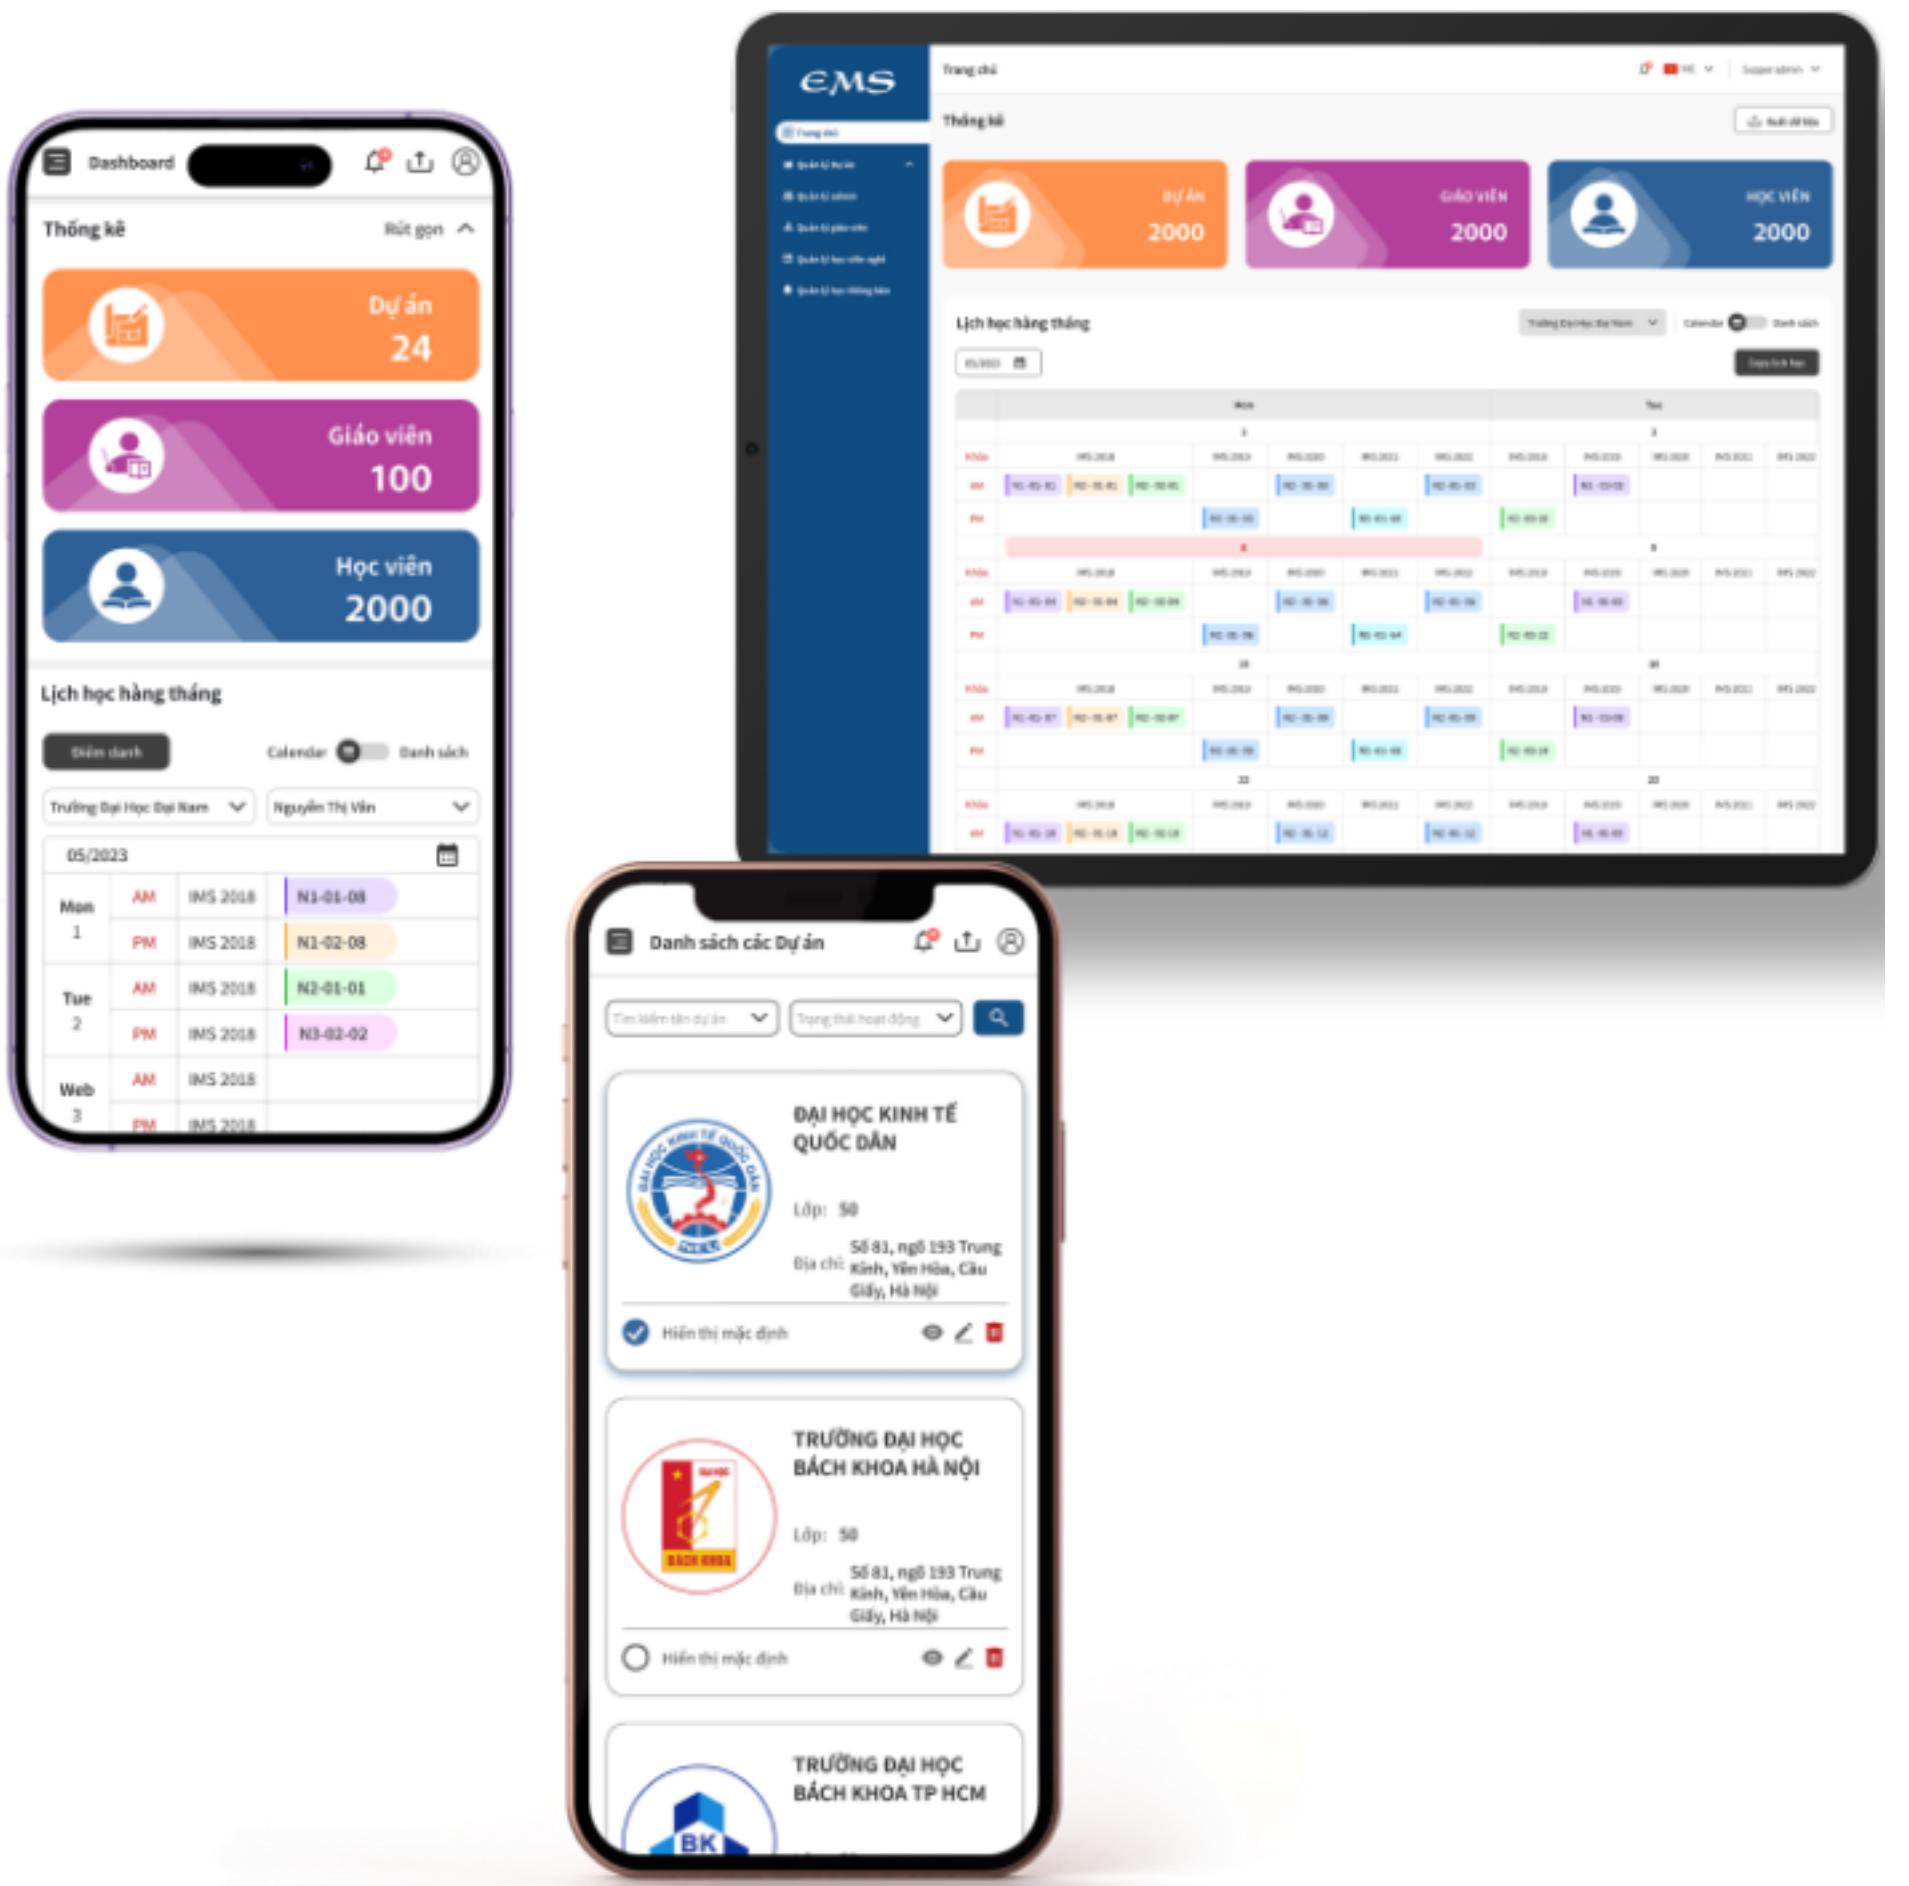

The EMS project is an advanced educational technology platform designed to optimize the learning and teaching processes

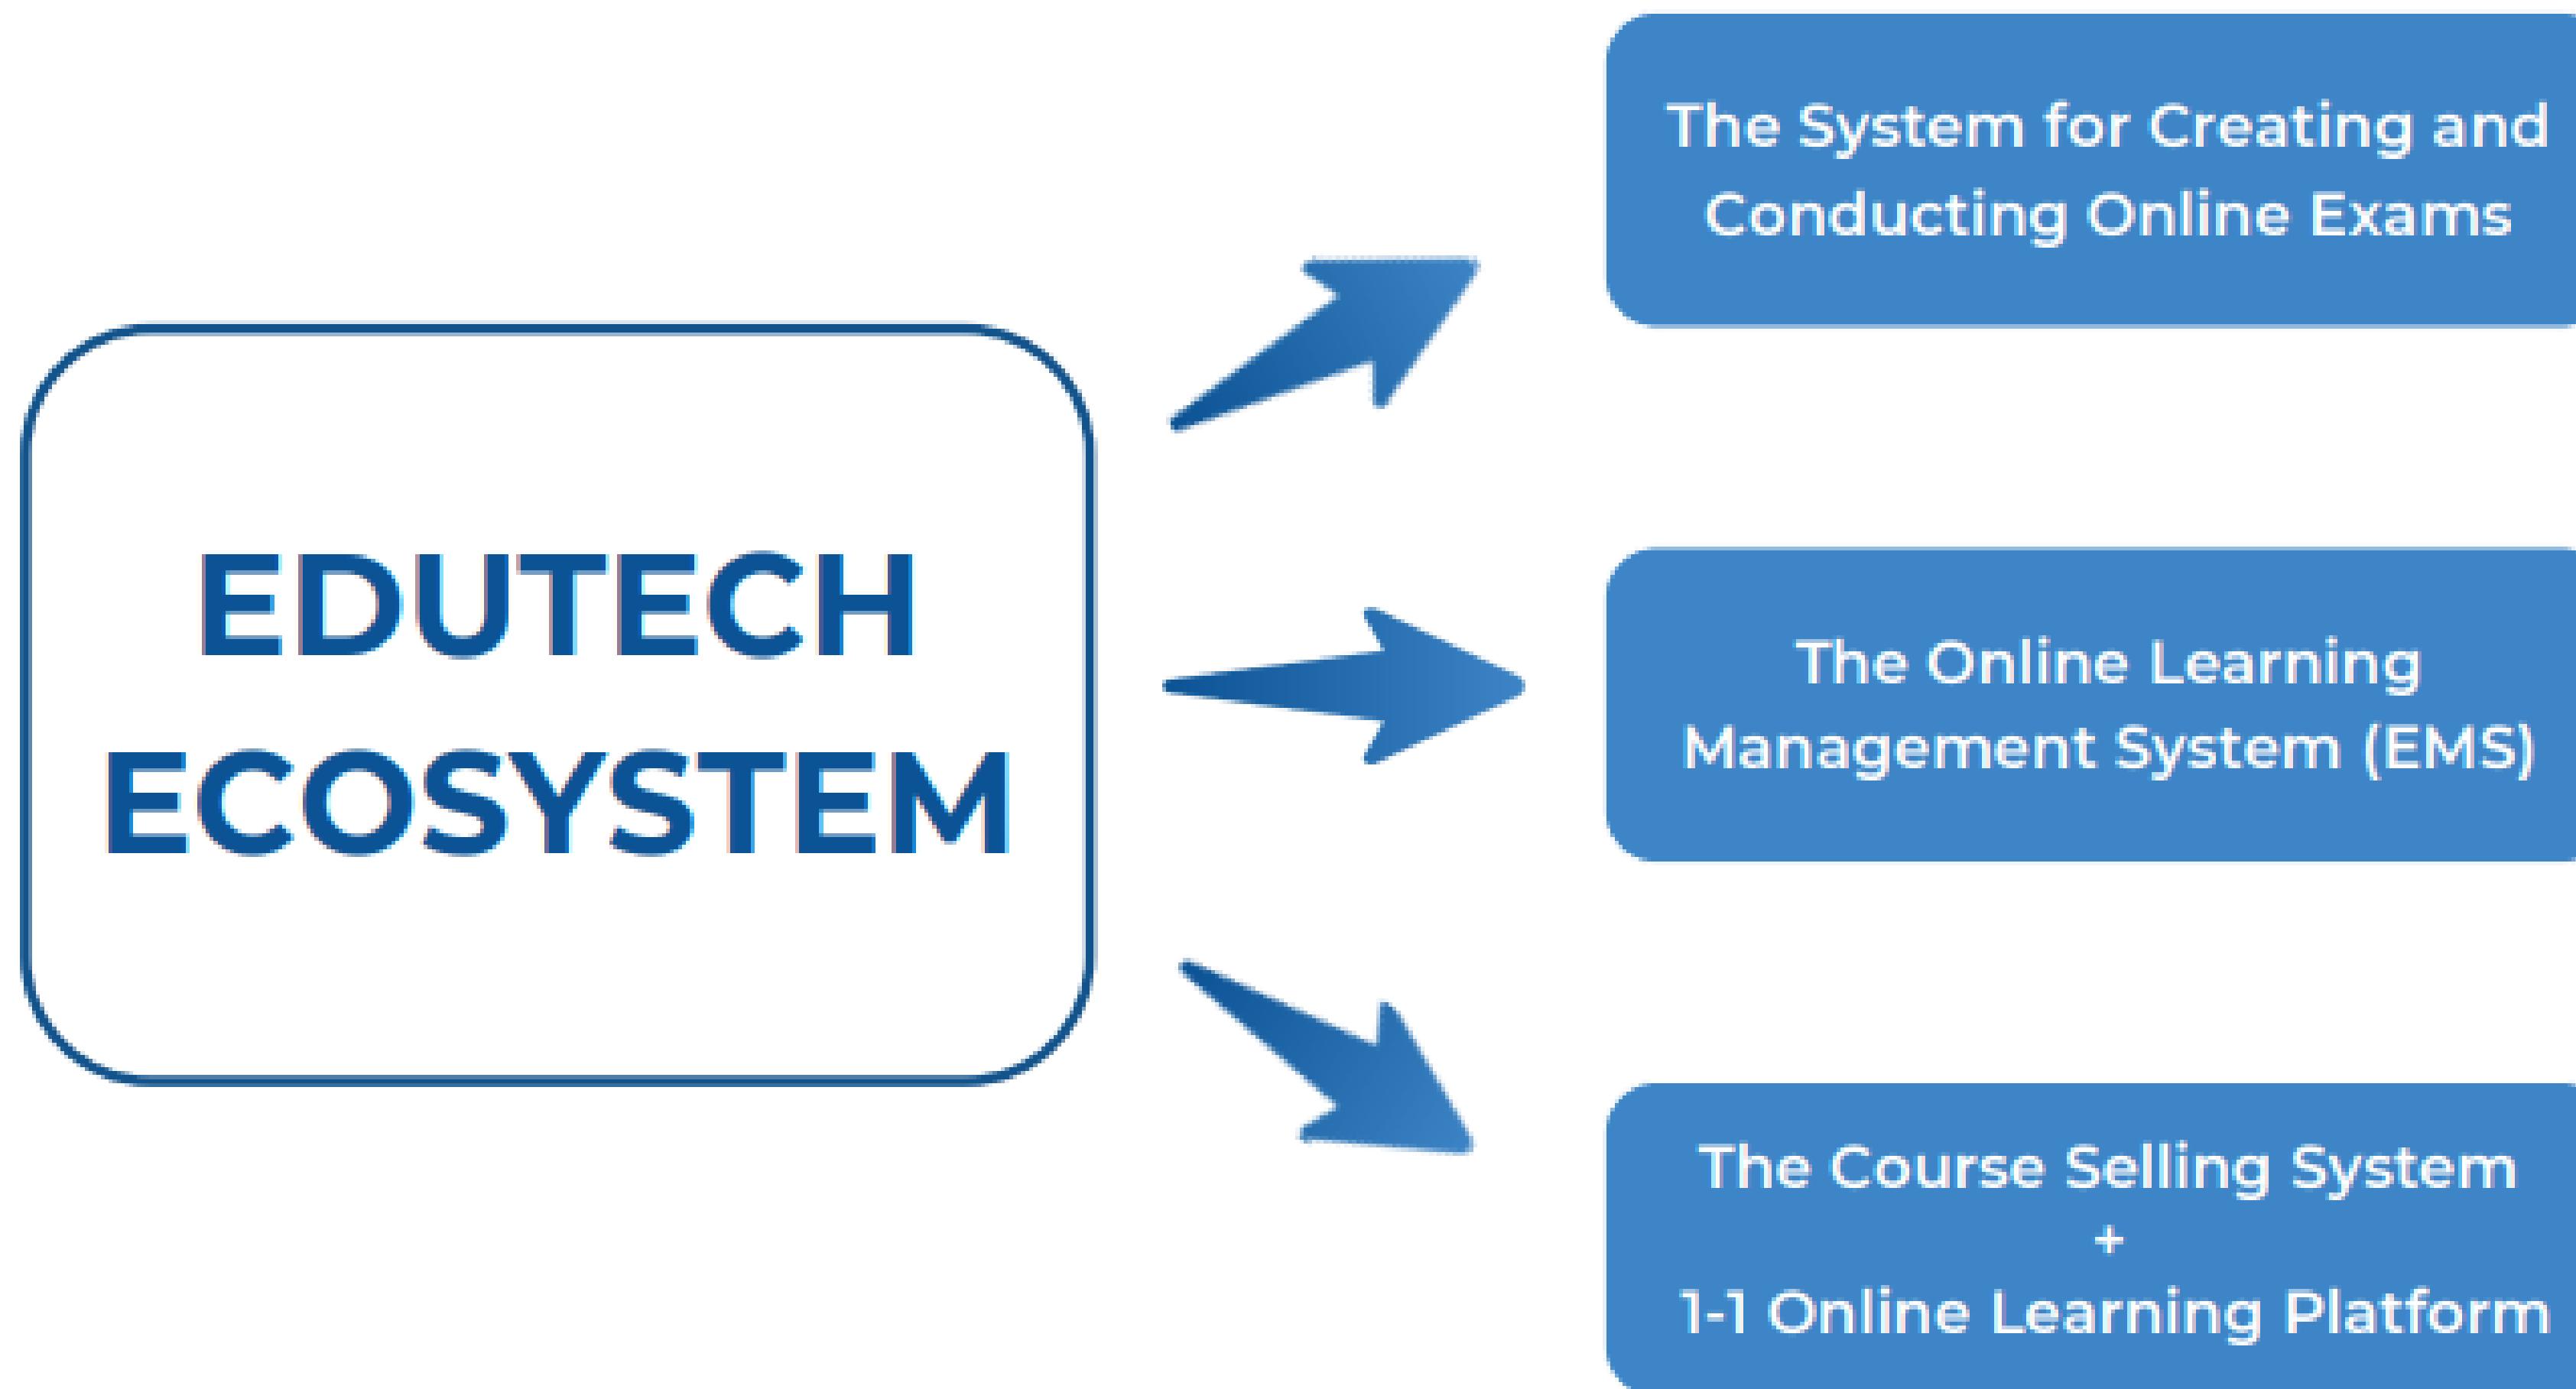

With a user-friendly interface and integrated diverse features, EMS provides a flexible and efficient learning experience

It offers an online environment for managing learning content, facilitating communication between instructors and learners, assessing learning outcomes, and many other supportive features to enhance the quality of education

The EMS platform is part of our Edutech ecosystem

Separate Management for Each Account Type: ADMINISTRATOR / TEACHER / STUDENT

This feature provides maximum flexibility and customization in managing an education system or online learning platform. By granting permissions based on roles, this feature helps each user operate efficiently, focusing on their tasks and responsibilities in the learning and teaching process

Administrator

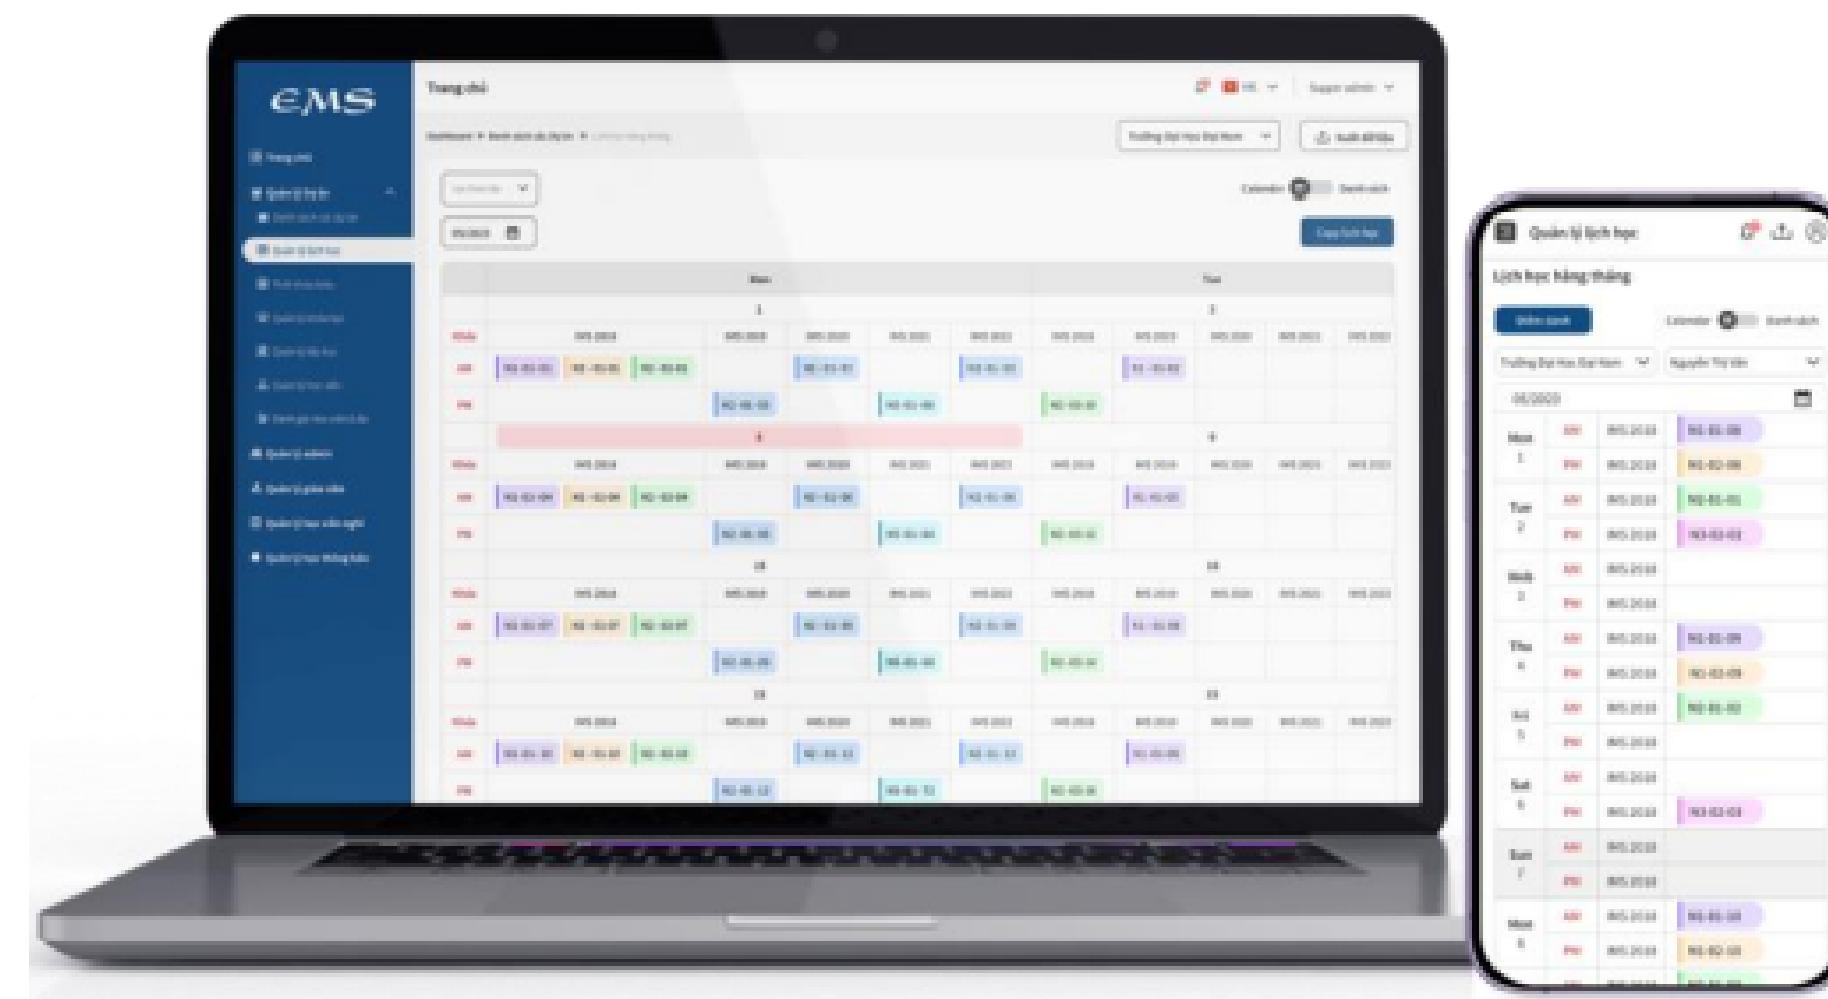

Teacher

Student

Integrate The Class Schedule Into The Calendar

Create schedules and timetables for each class effortlessly. This facilitates the management and tracking of the monthly class schedules for each class, making it more convenient

This feature provides a user-friendly and easy-to-use interface, allowing teachers to input information about their class schedules quickly. You can specify class periods, including the start and end times of each session, class materials, and exams. Additionally, integrating the class schedule into the calendar offers reminder and notification features, helping you not to miss any classes.

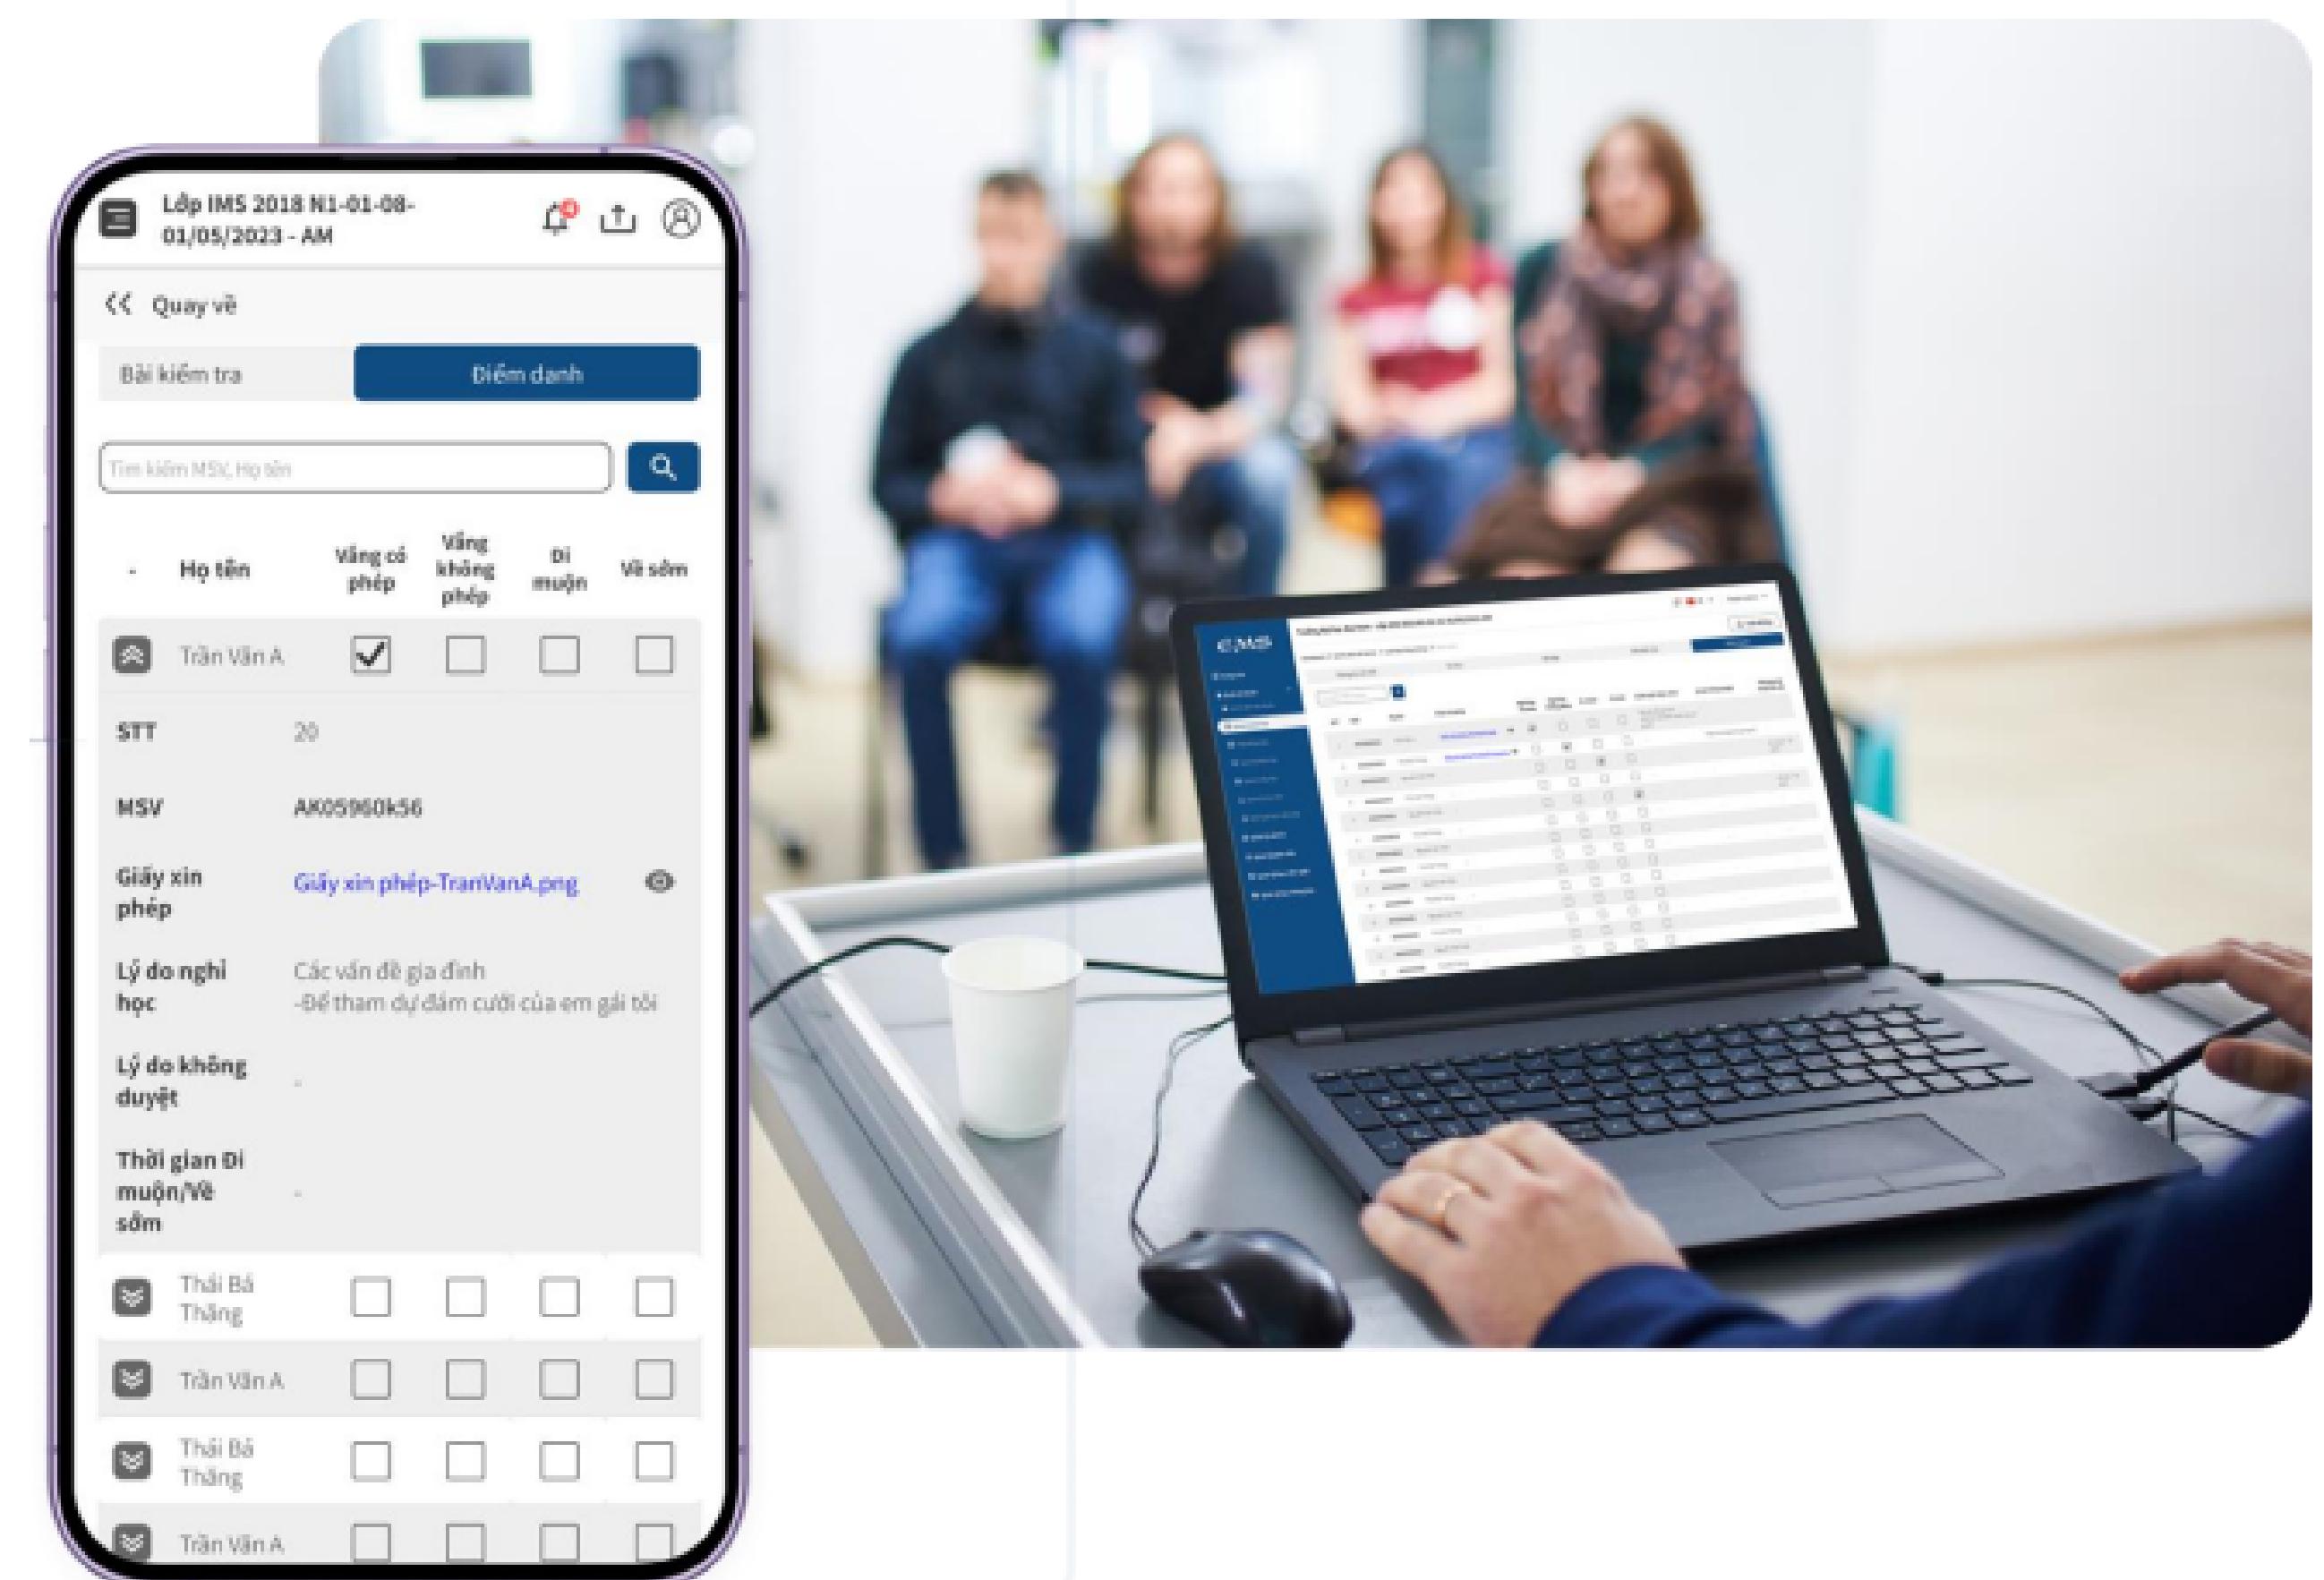

Taking Attendance Directly On The System

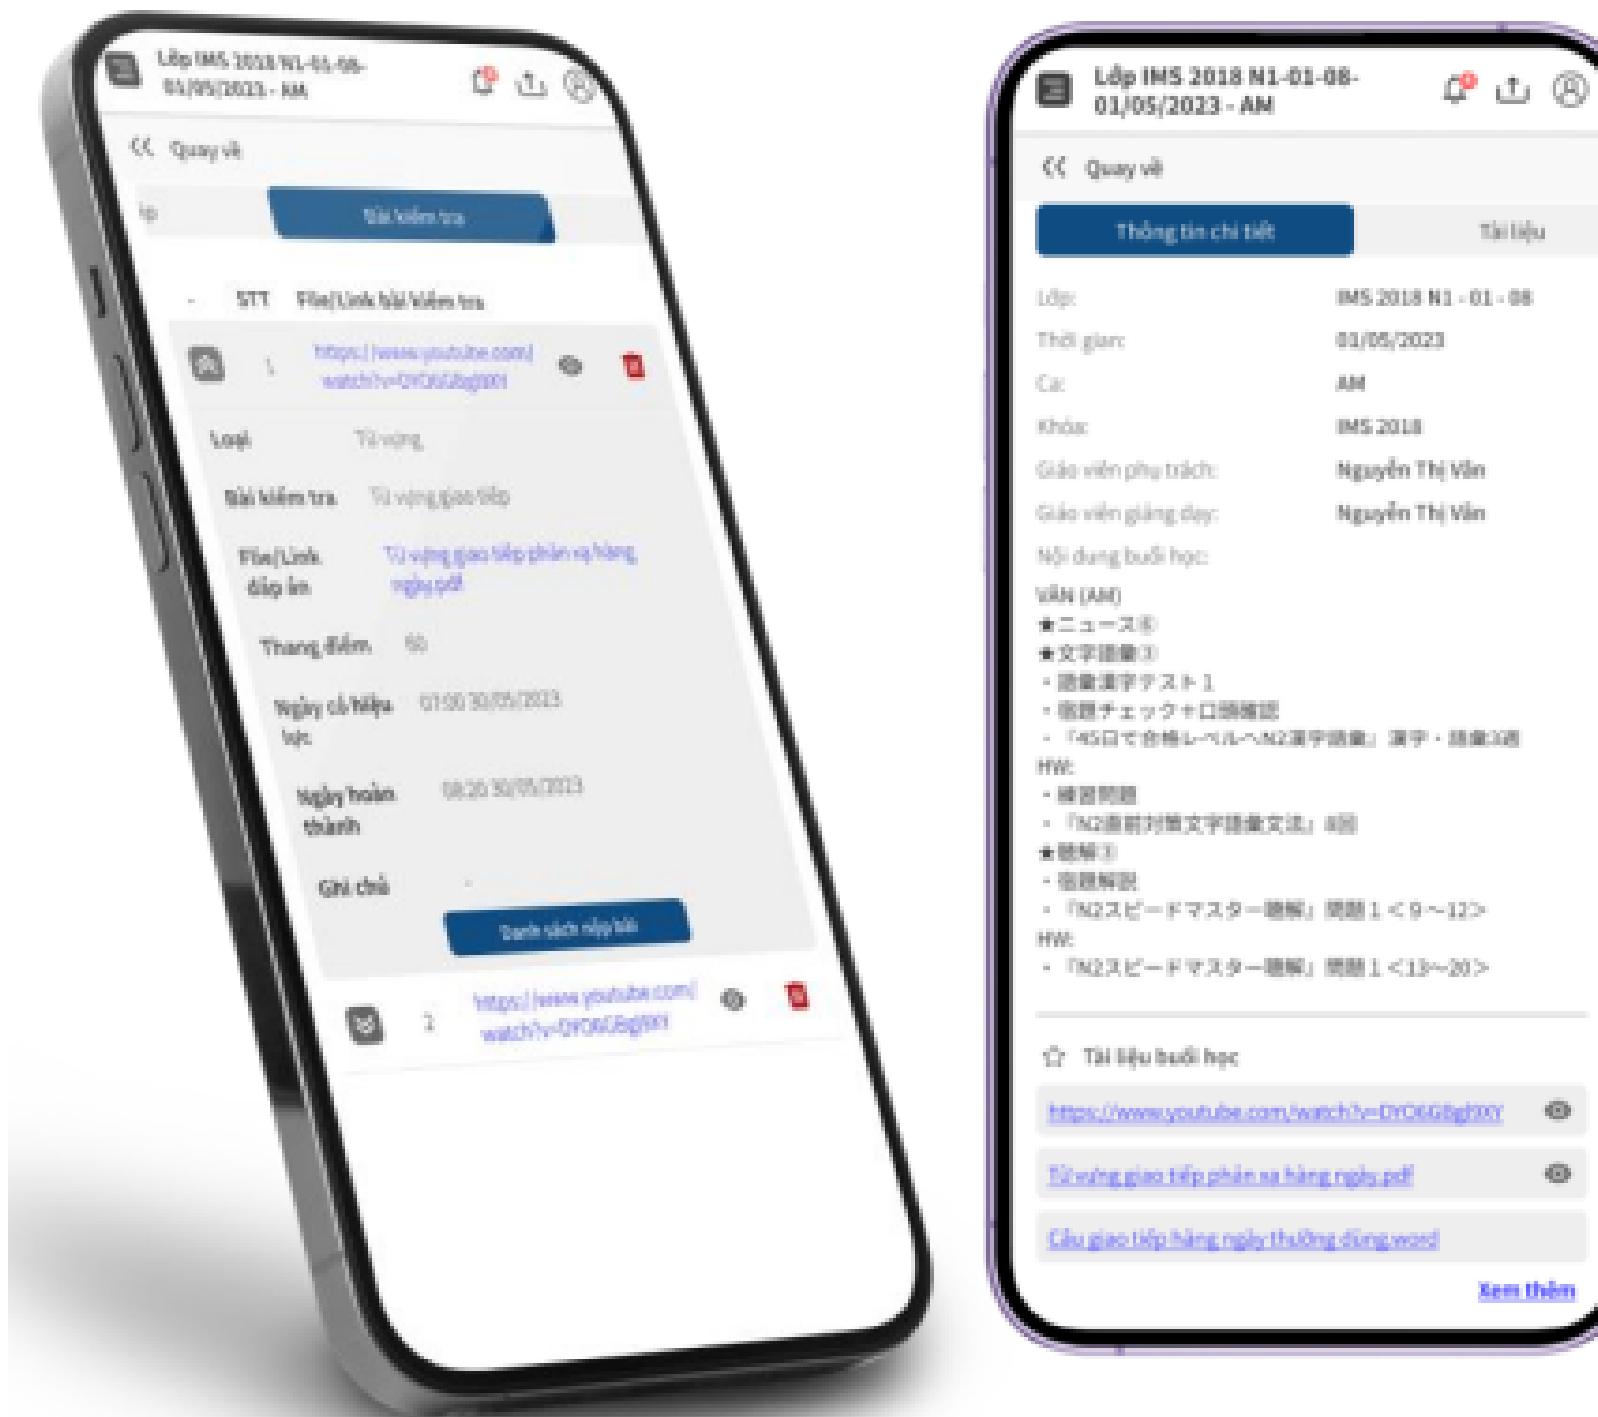

The feature of taking attendance directly on the system allows teachers to conveniently monitor the presence of students in the class

Simultaneously, students can also request for absence and submit permissions conveniently directly on the platform, creating favorable conditions for schedule management and interaction between teachers and students

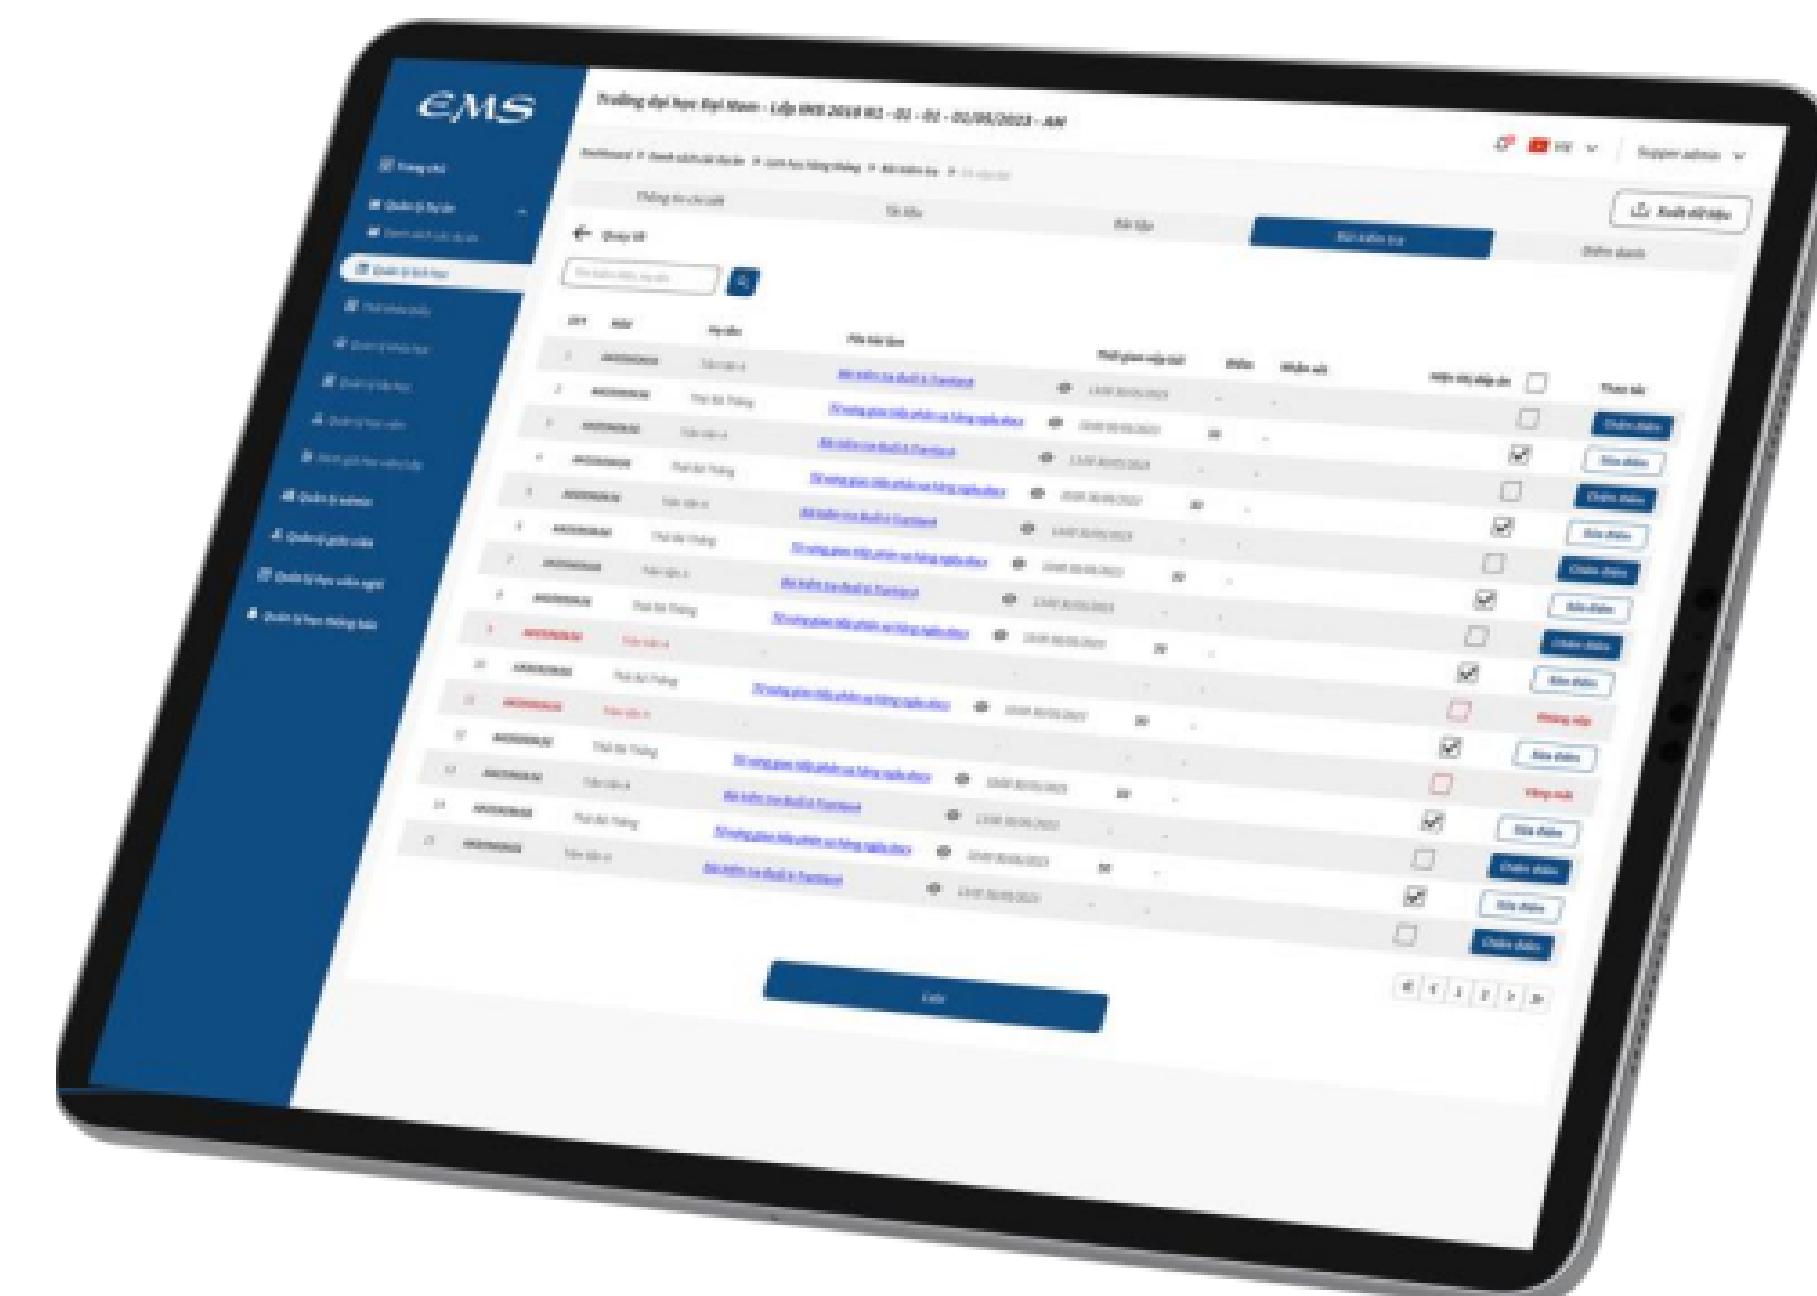

Support The Integration Of Learning Resources And Quizzes

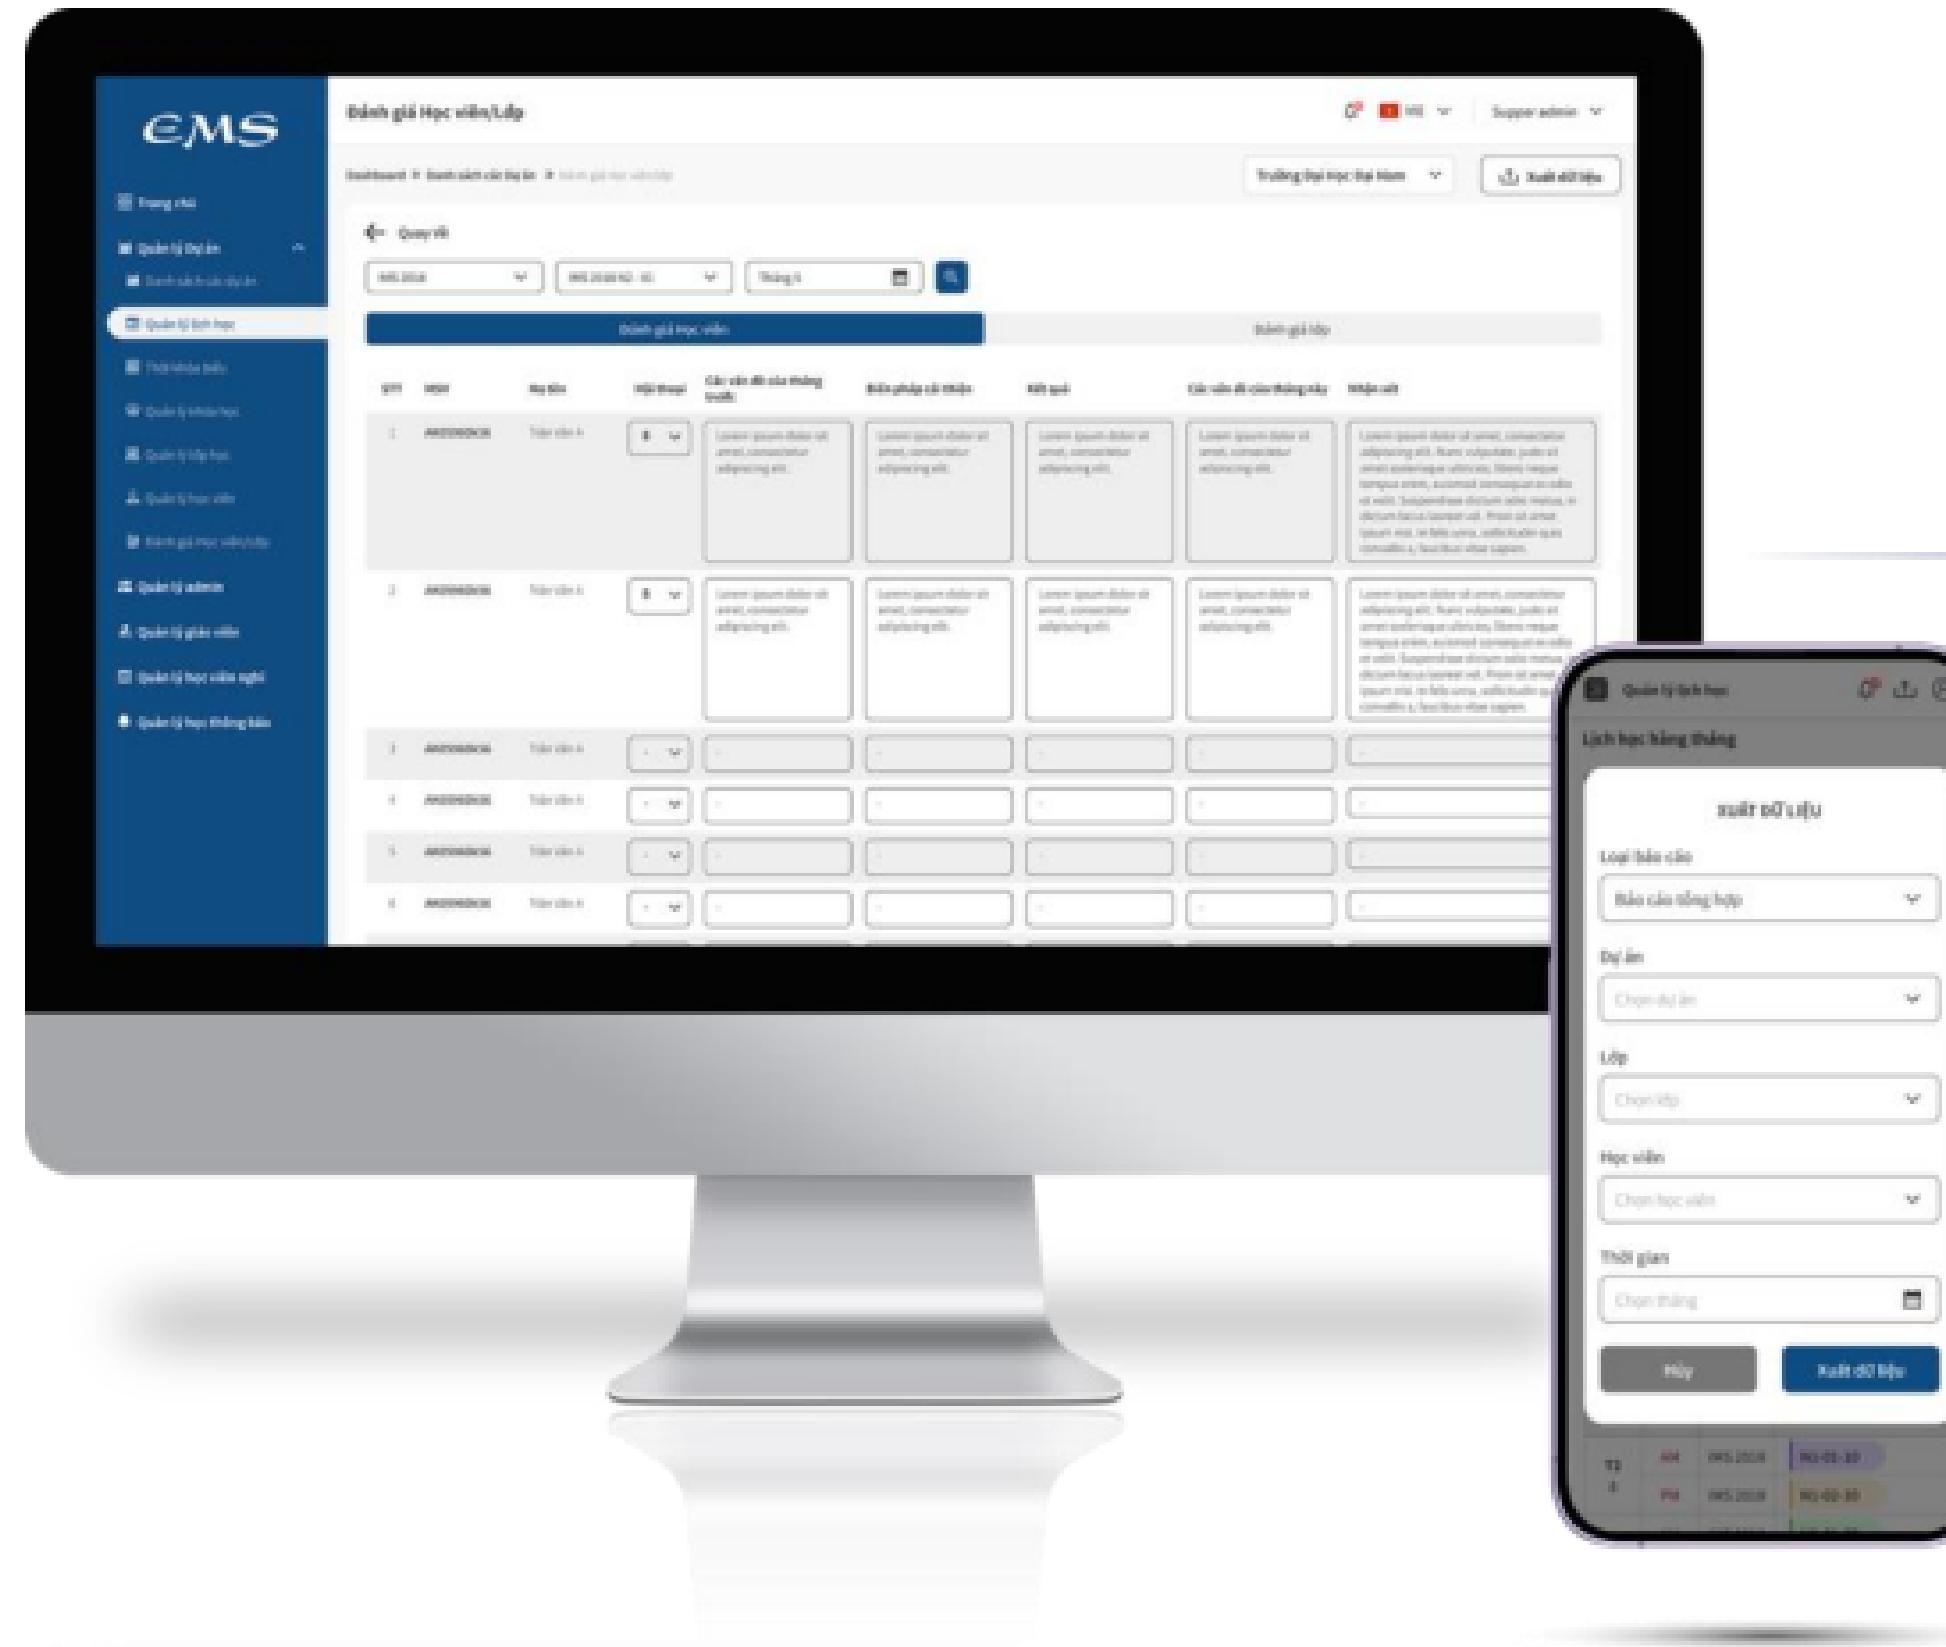

- Teachers can directly grade assessments within the system

Additionally, the EMS system also supports the integration of:

- Diverse learning resources such as files, videos, online lectures
- Online and offline quizzes to optimize multimedia learning processes

Individual Student Assessment, Generate overall reports

Teachers can assess the detailed learning progress of each student. Teachers can generate reports:

- Overview of the learning progress.
- Diligence
- Total teaching hours for the teacher.
- Monthly class schedule.
- Timetable by class/month.

=> This helps improve the efficiency of teaching management and quickly respond to the learning needs of students
